Alex.Garza@tufts.edu | alexander.garza40@gmail.com | 512-669-1392

EDUCATION

Tufts University, Medford, MA
Master of Science, Computer Science

The University of Texas at Austin, Austin, TX
Bachelor of Science

Technical Skills

Programming Languages: Python, JavaScript, Java, Scala, C#, C++, SQL, HTML/CSS
Tools & Platforms: Git, Docker, Postman, GitHub, Azure, GCP, Azure OpenAI, Azure AI Studio, Azure AI Factory
Frameworks & Libraries: .NET, FastAPI, Node.js, Express, React, LangFuse

EXPERIENCE

Chatsi AI · Full-time - Austin, Texas/Remote *Jan 2025 - Current*
Software engineer/ Data Architect

- Built flexible data transformation logic in C# to map inconsistent third-party product structures into a unified internal schema, including fallback handling for missing or malformed fields.
- Collaborated on the design and debugging of ingestion endpoints to ensure seamless integration between external data sources and internal services, reducing data loss and mapping failures across environments.
- Deployed schema and ingestion updates across development, staging, and production environments, while implementing dynamic configuration logic to support multiple data sources within a single processing pipeline.
- Led daily working sessions with teammates to troubleshoot ingestion issues, guide deployment workflows, and coordinate cross-environment testing to ensure consistent system behavior.
- Established standardized engineering practices across multiple repositories, including deployment workflows, coding standards, architectural patterns, and Git Flow, while mentoring team members to ensure consistent adoption
- Led a full backend re-architecture from a proprietary framework to FastAPI, migrating core endpoints and enabling improved observability through custom tracing and evaluation hooks

NtelSec · Full-time - Austin, Texas/Remote *Jan 2023 - Jan 2025*
Software engineer

- Designed and deployed an internal AI chatbot trained on proprietary document collections to enable secure, domain-specific question answering
- Implemented document ingestion and preprocessing pipelines to transform internal files into structured data suitable for training and retrieval
- Orchestrated end-to-end data flows from frontend user portals to backend databases, ensuring reliable ingestion and synchronization
- Developed techniques to efficiently extract, deploy, and reuse trained model artifacts across internal applications
- Integrated the chatbot with internal access controls to enforce role-based document visibility and secure usage

Select Interactive · Internship - Dallas, Texas *Sep 2022 - Dec 2022*
Full-Stack Software Engineer intern. *Jun 2021 - Aug 2021*

- Built and maintained dynamic, responsive user interfaces using React.
- Integrated frontend applications with backend services via RESTful APIs.
- Contributed to the full-stack codebase and participated in cross-functional feature development

Additional Information

Interests: Embedded Systems, Automobiles, AI research, Encryption, Cyber Security, White Hat Hacking
